

Instructions for Using Kaggle

1. Registration

The first step for using Kaggle is creating an account. To do so, you can access the [Kaggle](#) homepage and click on the register option at top right corner of the screen.

Please use the Register with Google option and use your student.unimelb.edu.au email address to make an account.

PLEASE ONLY USE YOUR STUDENT ID AS YOUR TEAM NAME.

NOTE: We will only consider submissions under the correct Student ID. All the other submissions are considered fake and will be ignored.

If you made a mistake, you could update your TEAM NAME, in your Kaggle profile.

2. Competition

The COMP90049 2023 SM1 Assignment3 is a *private* competition so only people who have access to this link can participate.

<https://www.kaggle.com/t/00fd833c73c1472eb3b257ad49f138dc>

After accessing the competition page, you need to “Join” the competition by clicking on the option on the top-right corner and accepting the rules.

Your prediction file needs to be in **.csv format** (.csv stands for Comma Separated Values file)

Your CSV file should exactly **two** columns and **1739** rows. Your file should have a header row: {'job_id', 'salary_bin'} and 1738 prediction rows.

	A	B
1	job_id	salary_bin
2	JOB-2019-0016087	9
3	JOB-2019-0008055	9
4	JOB-2019-0001658	9
5	JOB-2019-0016777	9
6	JOB-2019-0017600	9
7	JOB-2019-0000279	9
8	JOB-2019-0010945	9
9	JOB-2019-0010096	9
10	JOB-2019-0017154	9
11	JOB-2019-0008605	9

Given this correct format, you will be able to “Submit Predictions” using the provided option.

If your prediction file has the correct format (2 columns, 1739 rows, *correct* header and *correct* id-s) it will be loaded in Kaggle *Leader Board* successfully.

Upload submission file

Your submission should be in CSV format. You can upload this in a zip/gz/rar/7z archive, if you prefer.

We expect the solution file to have 298 prediction rows. This file should have a header row. Please see sample submission file on the [data page](#).

After a successful submission, Kaggle will give you a score (the accuracy of your test data predictions using 30% of the data). And you can also find the ranking of your results using the *public* leader board.

Your most recent submission				
Name	Submitted	Wait time	Execution time	Score
test_OR.csv	just now	1 seconds	0 seconds	0.15730
Complete				
Jump to your position on the leaderboard				

NOTE: We are checking your prediction accuracy results on 100% of the data using the private Leader Board.

It is because we do not want you to try and improve your rank just by *overfitting* your results for the test data (using excessive try and error submissions on Kaggle).

You can only submit up to 8 predictions on each day. It is important to keep in mind that we are NOT marking the accuracy of your model, we are assessing your ability and skills in developing and analyse of a logical argument about the problem of tweet sentiment classification, using different Machine Learning methods.

Prior to competition close, you may select a final submission out of the ones submitted previously – by default the submission with highest public leader board score is selected by Kaggle.
